

QuickShot™ Oven Cleaner

QuickShot™ Oven Cleaner compliments the High Performance Oven Cleaner as part of a regular program of preventive maintenance. While the High Performance Oven Cleaner is for wiping and soaking of oven parts, nonflammable QuickShot is for blasting residues away. Use QuickShot when the area to be cleaned is a tight, hard-to-reach spot which cannot be wiped by hand. This includes flux condensers, gears, chains, pulleys, ventilating fans, motors and motor windings.

This solvent is actually two cleaners in one bottle. QuickShot uses a new, ultra-strong HFC solvent from DuPont which dries almost instantly. The fast-drying solvent dissolves the hardened residues. Then the slow-drying solvent holds them in suspension, making it easy to rinse them away.

QuickShot works on all types of flux residues. It is safe on metal pallets, baffles, heating elements, clamps, chains, gears and housings; but not on the plastic materials found on pick-and-place machines. The cleaner leaves no residues and is noncorrosive, with almost no-odor. It is completely ozone-safe, has a low VOC content and has a modest global warming potential.

Technical Details

Chemical Family	HFC Solvent Blend
Appearance	Pale Clear Liquid
Aroma	Slight, ethereal
TLV	None assigned; see MSDS
Flashpoint (TCC)	None
Safety Rating	Nonflammable
NFPA:	Health: 2; Fire: 1; Reactivity: 1
Ozone Impact	Zero
Propellant	HFC-134a
Organic Content *	790 g/l
TSCA Listed	Yes

Packaging

Aerosol	340 g	MCC-QRS
---------	-------	---------

Notes

This product is an aerosol and packaged twelve cans/box. It is not available in Canada. Refills are not available. Lint-free wipes are not packaged with QuickShot.

* Includes only non-exempt ingredients.
